

THE RESIDUAL

What the UAP record actually says when you read the primary documents

An adversarial, source-first examination of the entire alien-imagery question — US, British, Soviet, Brazilian — including the documents the disclosure movement does not cite and the limitations the official reports do not advertise.

Verdict: zero verified extraterrestrial imagery or footage Primary sources pulled and hashed locally Corrections published: 5 Open experiments: 5

THE VERDICT, IN ONE LINE

No verified image or video of a non-human craft has ever been authenticated. That is not the interesting finding.

The interesting finding is **why a belief this thoroughly evidenced against has survived sixty years of free, primary, citable documents** — in a subject where the residual measures our filing systems rather than the sky, the archive is curated for process rather than truth, every adjudicating body in forty-one years was staffed by someone chosen for a prior, and the official report that denies everything is, in its own limitations section, the strongest evidence in the file.

01 What people say is being hidden — vs. what the documents say

Each row pairs a circulating claim with the verbatim finding of the primary document it supposedly contradicts. All right-hand quotes are from documents you can download today, free.

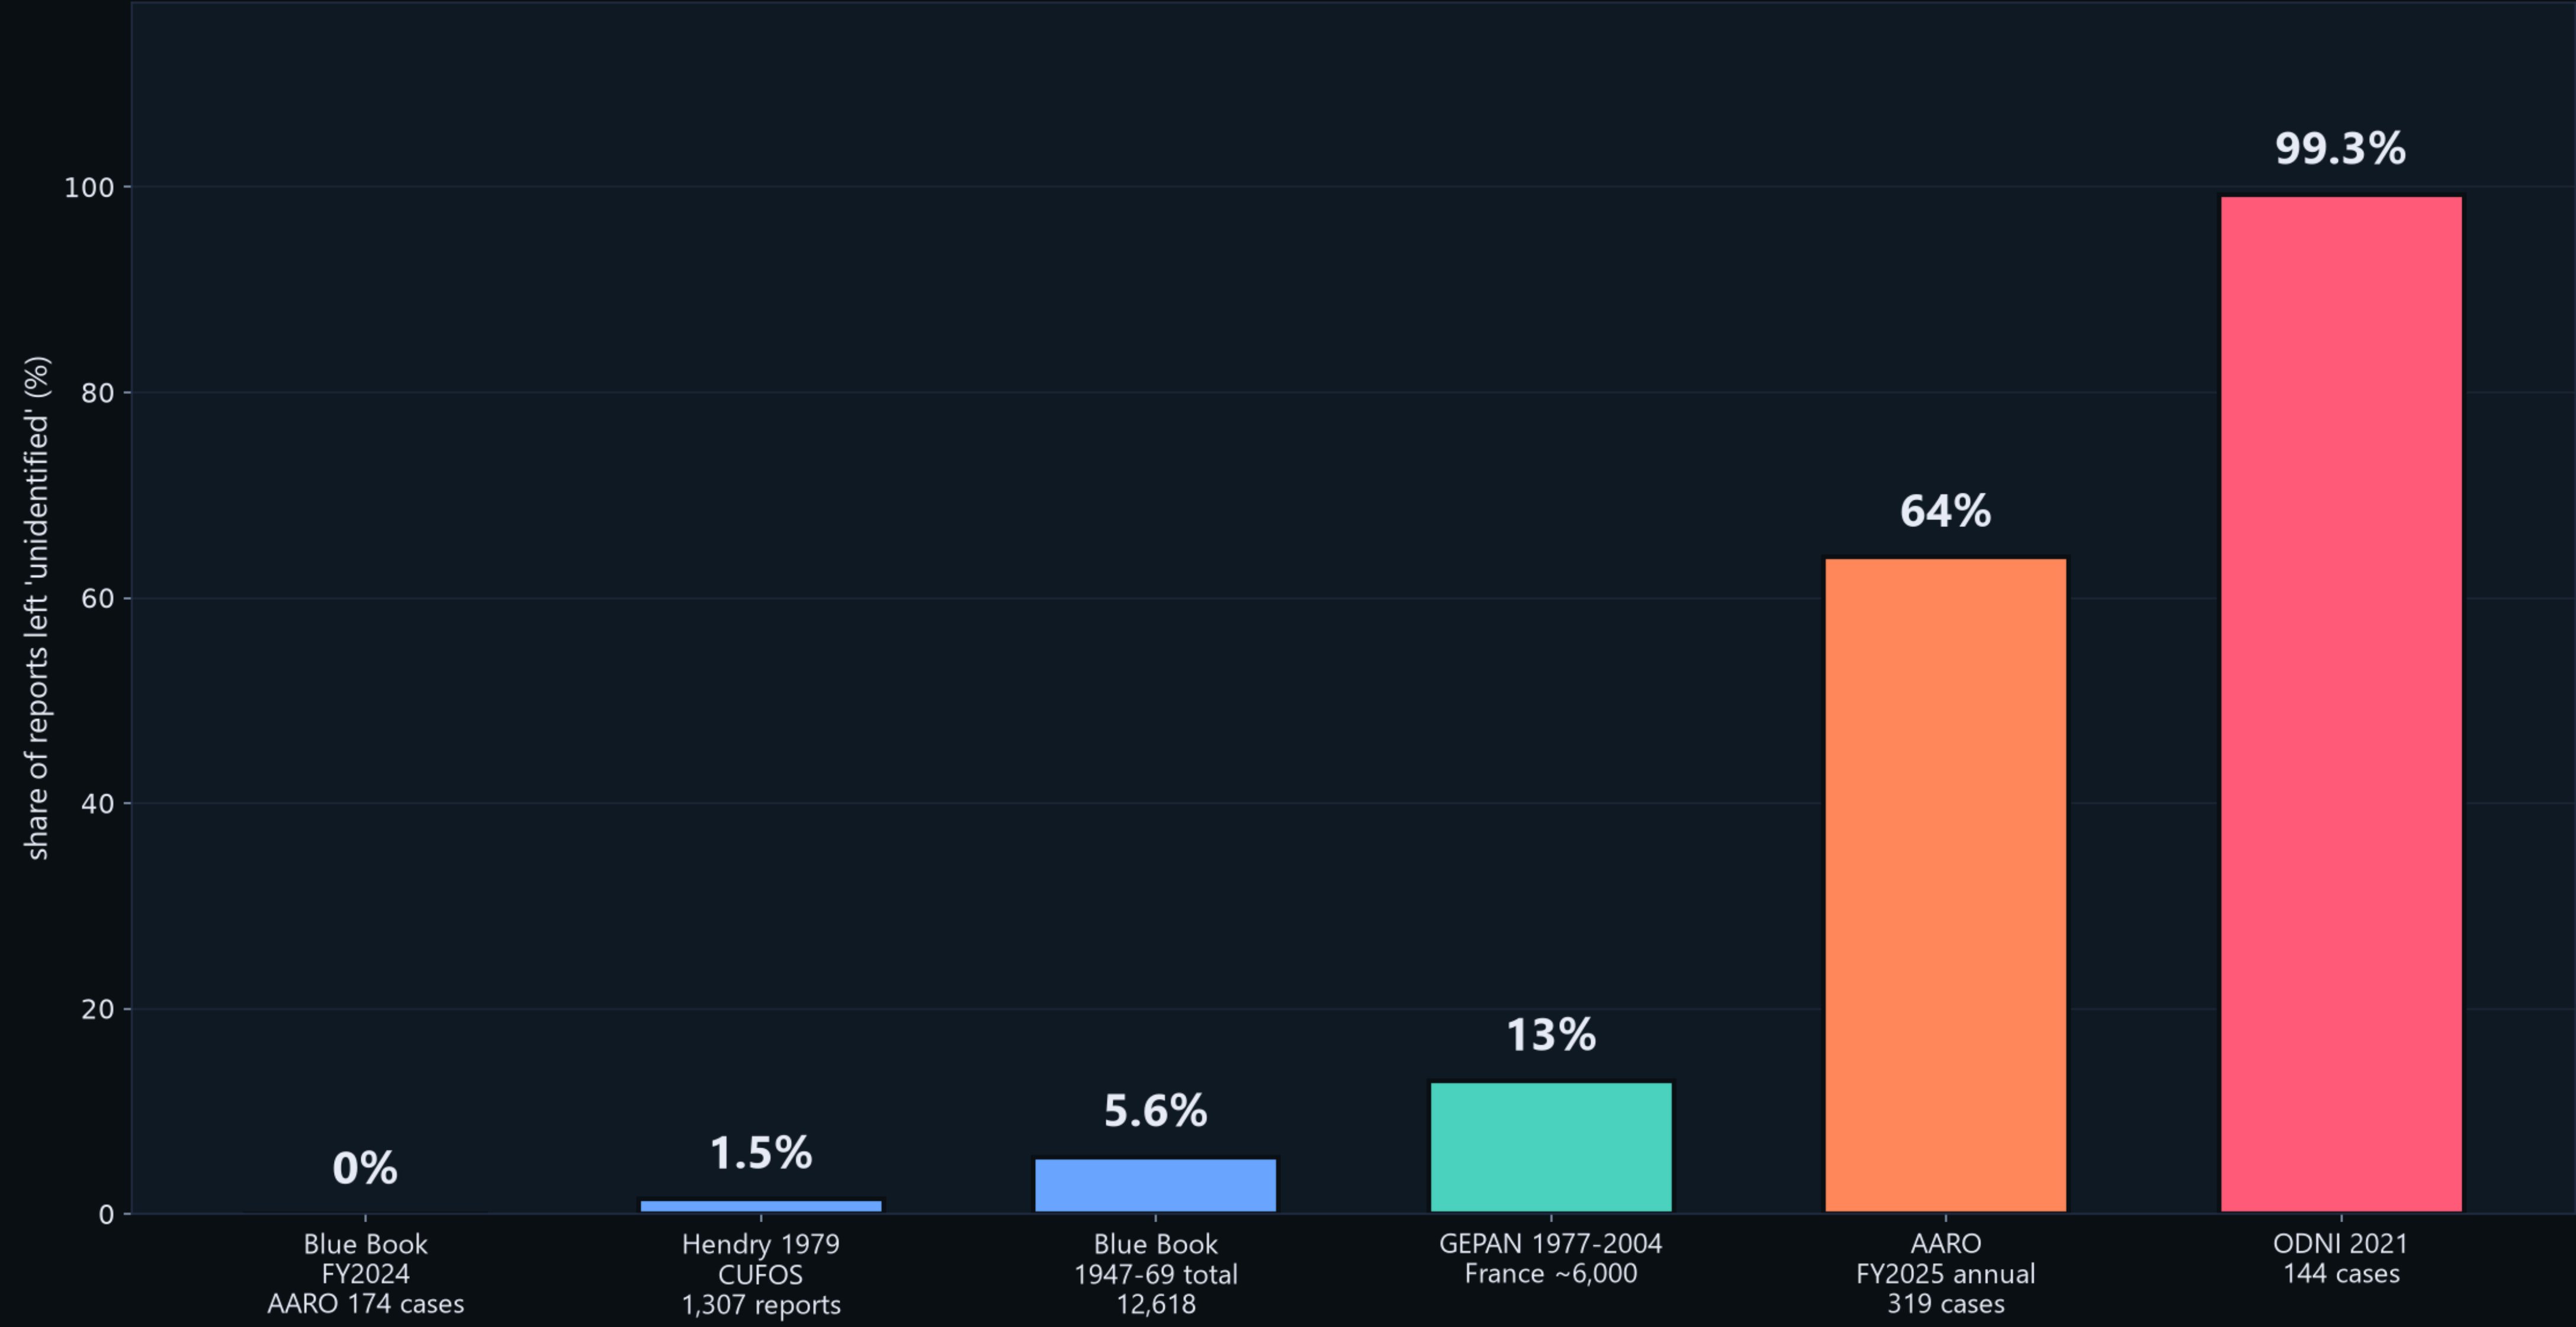

THE CLAIM	WHAT THE PRIMARY DOCUMENT ACTUALLY SAYS
"They recovered non-human biologics."	"No extraterrestrial craft or bodies were ever collected — this material was only assumed to exist by KONA BLUE advocates and its anticipated contract performers... The SAP was never approved or stood up, and no data or material was transferred to DHS." AARO Historical Record Report Vol. 1, p. 35 — the claim traces to a programme proposed by Senators Lieberman and Reid, then rejected by DHS leadership "for lacking merit."
"The 1948 alien metal is a superalloy they couldn't reproduce."	"Mostly composed of magnesium ." And the false memory has a documented cause: "Prior to AARO's acquisition of the sample, the organization fabricated a replica of the sample to determine if it could be done. The same organization made an attempt to replicate the sample at the same specific location cited by the interviewee." AARO HRR Vol. 1, p. 33. A replica-making exercise plus a site visit generated a confident memory of a reverse-engineering meeting. No conspiracy required.
"There are secret special-access programmes they won't name."	The word "undisclosed" appears zero times in 163,120 characters. "All the programs assessed to be authentic were or — 'if still active' — continue to be, appropriately reported to either or both the congressional defense and intelligence committees ." AARO HRR Vol. 1, p. 34, read directly from the 63-page PDF.
"Dozens of insiders have come forward."	AARO interviewed "approximately 30 people" in total. Of the small group anchoring the claim network, two never formally sat down with AARO and are known only as second-hand references. AARO HRR Vol. 1, pp. 30, 36. AARO numbered its sources and cross-referenced them against participation lists.
"A real programme exists — it just isn't disclosed."	Exactly one such programme is documented. "AARO confirmed the existence of one IC CAP that was unnecessarily expanded in 2021 to include a UAP reverse-engineering mission. This program was expanded despite the lack of any evidence or mission need ... The appropriate congressional committees were notified... This CAP was disestablished due to its inactivity, absence of mission need, and lack of merit ." AARO HRR Vol. 1, p. 35. Created on no evidence. Reported to Congress. Recovered nothing. Closed. The most honest paragraph in the report, and nobody quotes it.
"The 2026 releases prove something is up there."	The release is ~85% grainy video by volume — 14.2 GB of footage against 2.4 GB of actual reports. It includes a 74-year-old film of birds , lunar imagery already attributed to micrometeoroids, and some computer-generated content. PURSUE release bundles 01–06, 8 May – 18 Sep 2026.
"Other governments are hiding it too."	"As recommended by the report, the DIS ceased to monitor unidentified aerial phenomena sighting reports (and therefore reaped a saving in staff time) as they contained no information of Defence Intelligence interest and no further action was taken." Hansard, House of Commons, Vol. 458, 26 March 2007, answer to Norman Baker MP. The stated reason the British programme ended was a staffing saving.

02 The lines people will want to screenshot

Nine documents, four countries, 1946–2026. Every one is public. Every one has been for decades.

"UAPs exist but they are not space ships. They are natural, atmospheric and other phenomena, some of which are not fully understood." PROJECT CONDIGN · BRITISH DEFENCE INTELLIGENCE · 2000 · 465 pp	"No evidence for the existence of solid objects was found by the study." SAME REPORT — AND IT RECOMMENDED RESEARCH INTO PLASMA DECOYS
"Further details of the author, including the name, are being withheld under the terms of the Data Protection Act 1998." UK MINISTER, PARLIAMENT · 2007 · THE REPORT IS UNATTRIBUTABLE BY LAW	"AARO cannot discount nor rely on interviewee accounts alone because of the extraordinary claims contained in their reports." AARO HRR VOL. 1, p. 30 — A LIMITATION NOBODY QUOTES
"Many cases remain unsolved — primarily because of the lack of actionable and researchable data." AARO HRR VOL. 1, p. 37 — H1, ADMITTED BY THE INSTITUTION	"Very little actionable data exists beyond limited firsthand narrative accounts." AARO, ON ITS OWN UNRESOLVED NUCLEAR CASES · p. 33
"Hundreds and hundreds of people... they thought it was real." YANKEE BLUE · THE US AIR FORCE FED A FAKE SAUCER TO NEW COMMANDERS FOR DECADES	"Despite claims of an international UFO cover-up, there has been absolutely no collaboration between UK and other countries on the subject of UAPs." PROJECT CONDIGN — REFUTES THE COVER-UP MYTH IN ITS OWN TEXT
"The premise that the USG is hiding aliens was seeded INSIDE the US Air Force, on purpose, as an induction ritual — and the Air Force asked AARO to omit it from the 2024 public report." WSJ, 6 JUNE 2025 — AND VOLUME II IS STILL UNPUBLISHED, 29 MONTHS LATE	

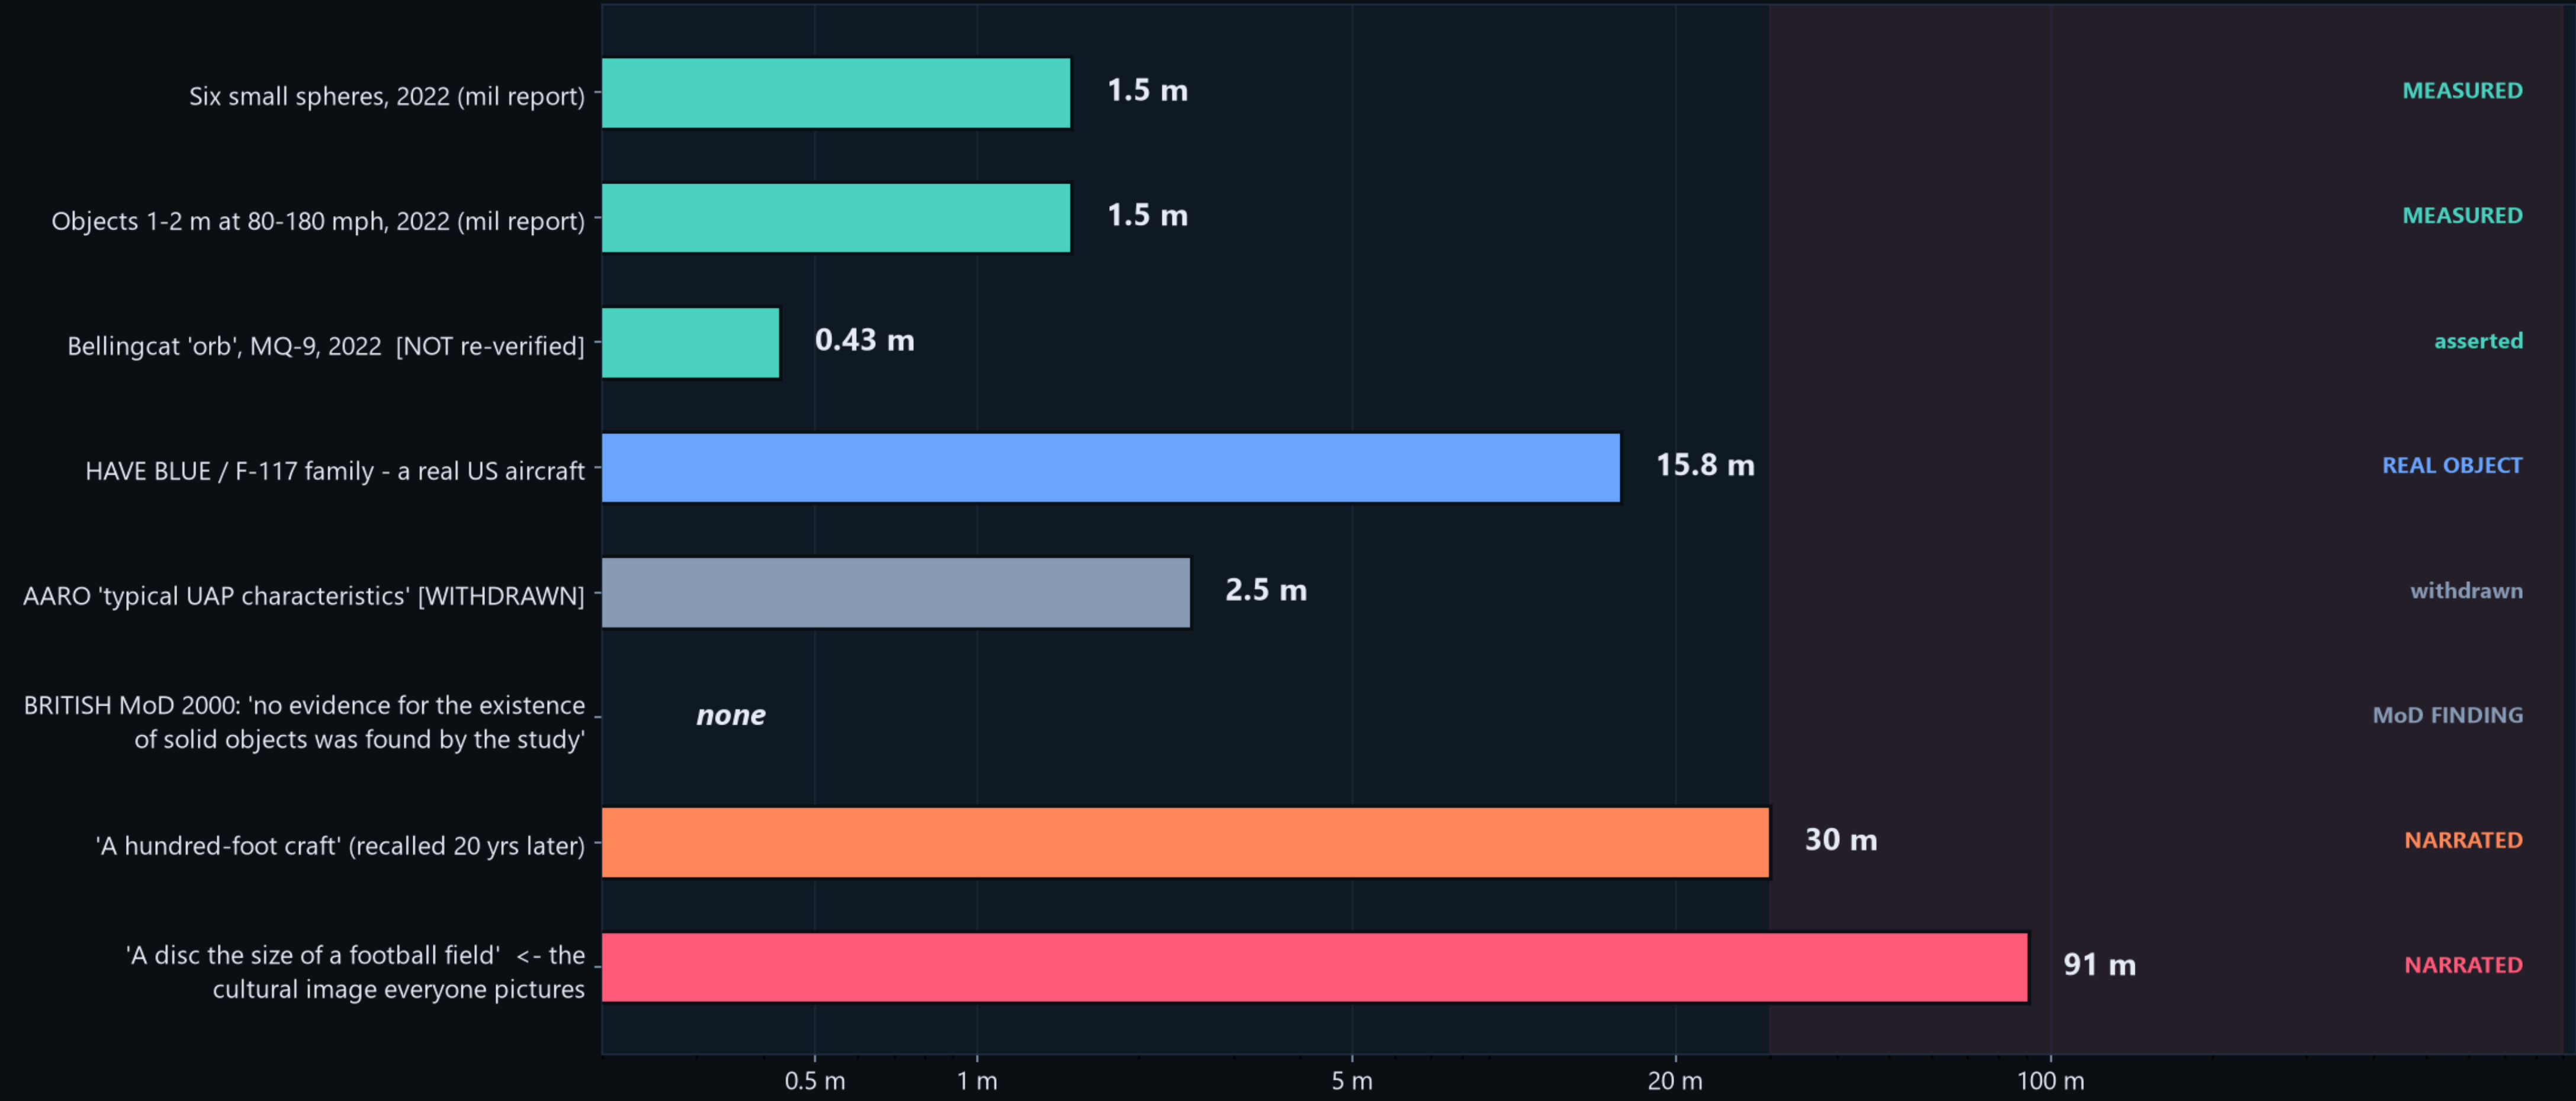

"THE UNEXPLAINED PERCENTAGE" IS A MEASUREMENT OF OUR INTAKE FILTERS, NOT OF THE SKY

Same phenomenon. Six programmes, four countries, 55 years. The rate ranges 0% to 99.3%.
The spread tracks the INTAKE FILTER and the DECISION RULE, not the object. Two of these figures come from the SAME office in consecutive years.

The single cheapest devastating point in this subject, and it requires no authority. The unexplained rate fell from over 20% to a few percent *immediately after the 1953 Robertson Panel* — it fell when they stopped asking. AARO went 0% → 64% → 40% unresolved across consecutive reports from the same office in the same year. Battelle's rule required two analysts to agree a case was identified but *all four* to call it unidentified, and in the worst-quality reports the identified rate *rises* to an identical 70% military and civilian — the less information a case holds, the more likely it is called identified. That is gap-filling, not sky-watching.

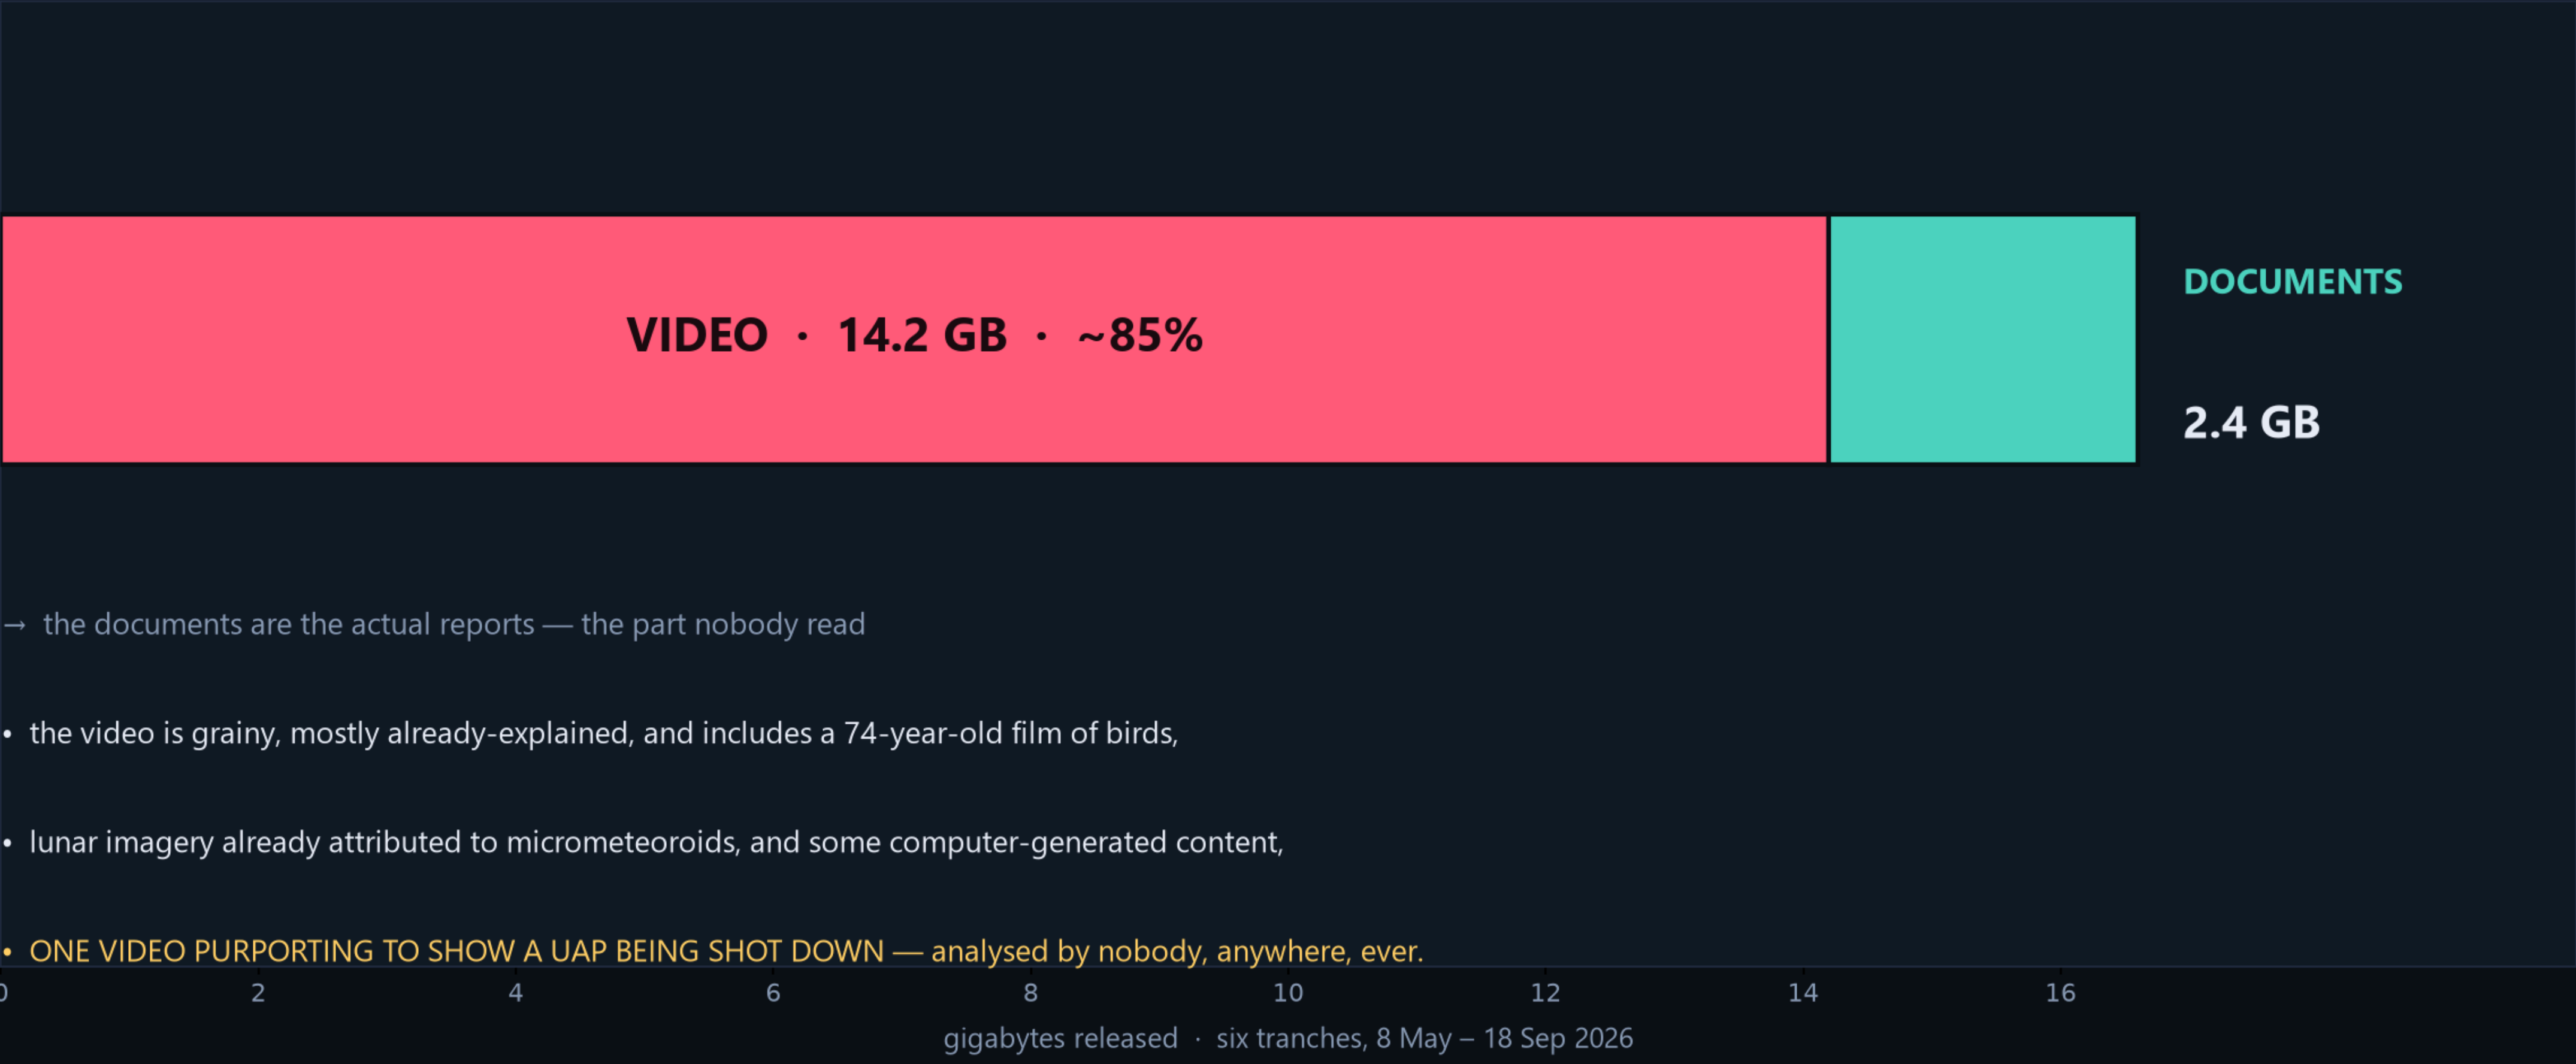

EVERY MEASURED OBJECT IS HUMAN-SCALE.
EVERY NARRATED OBJECT IS A FOOTBALL FIELD.

Log scale. Shaded band = the size range of the cultural image. Nothing in the official record has ever been measured inside it.
A 1-2 m object is not frightening — which may be exactly why nobody who measures one ever gets interested.

Every measured object is human-scale. Every narrated object is a football field. The only dimensions in the official record come from a released military report: 1–2 metres, and "six small spheres." The lore says thirty to a hundred metres. Nothing in the record has ever been measured inside the shaded band. A 1–2 m object is not frightening — which may be exactly why nobody who measures one ever gets interested.

THE LARGEST DECLASSIFICATION IN THIS SUBJECT'S HISTORY IS ~85% GRAINY VIDEO BY VOLUME

Access notes, disclosed

aaro.mil returns HTTP 403 to non-browser clients and the session browser was unavailable; the document was obtained from the Wikimedia Commons mirror, which rate-limits at HTTP 429 and required a backoff. Neither is a restriction on the document. Every quote in this poster was read from the retrieved file, not from a summary.

08 A reading guide — download these tonight

Every document below is public, free, and has been for years. Most take under an hour. The right-hand column is what you will find, so you can skip to the interesting part.

DOCUMENT	WHERE / HOW LONG	WHAT YOU WILL FIND, AND WHAT TO SKIP TO
AARO Historical Record Report Vol. 1 (2024) 63 pp	Wikimedia Commons or aaro.mil. 20 min.	Skip to p. 33 ("AARO Investigating Unresolved Historical Nuclear-Related UAP Cases" — four sentences long) and pp. 35–36 (the provenance analysis and KONA BLUE). The magnesium finding is p. 33 . Note what the report says about <i>its own limitations</i> , which is stronger than its conclusions.
Project Condign (2000) 465 pp, 4 parts	UK National Archives / FOI. Start with the executive summary.	The answer, in one line: "UAPs exist but they are not space ships." Volume 2 holds 25 working papers including "UAP effects on Humans/Electronic equipment and objects." Volume 3 holds "Potential for Exploitation of UAP-associated effects." Both unread in public for 20 years.
Hansard, 26 March 2007 Vol. 458, one screen	hansard.parliament.uk — search "Unidentified Flying Objects"	The entire British official position, in a written answer, for the price of a search. Contains the reason the UK programme ended and why the author is unnamed . Read it in ninety seconds; it is the single most efficient document in this investigation.
The Condon Report (1968) 1,485 pp	Online free since 1968	Cited daily as science's verdict. By Hynek's characterisation it could not explain more than a quarter of the cases it examined, and it contains a case where the committee said the probability of a genuine UFO was "fairly high." Also read the staff-selection record: a panel chosen for <i>lack of</i> relevant expertise.
Progress in Aerospace Sciences 2022 + 2025, open access	doi 10.1016/j.paerosci.2025.101098 — no paywall	The Haynesville radiative-energy paper, and a companion on physical samples with a NASA physicist, in a guest-coordinated UAP special issue. Read the abstract's method sentence first. The inputs are witness-described angular diameter and brightness at an assumed distance. No one quotes that part.
PURSUE releases 01–06 6 tranches, 2026	war.gov/ufo — expect 403; a browser works	The 6th tranche contains a 38-page 2010 DIA study of injury to human observers, whose subjects were antenna engineers benchmarked against 42 published and ~300 unpublished conventional RF injuries. Also a 1952 recording of the first Blue Book director giving the 20% figure.

09 The decoy nobody checked for

An active, platform-integrated US capability to generate fake aircraft in the sky — and not one UAP case has ever been tested against it. Seven falsifiers, each a specific test on a file.

What the patent actually claims

US Patent 11,359,892 B2 — "System and method for laser-induced plasma for infrared homing missile countermeasure." Filed 6 Aug 2018, granted 14 Jun 2022, **active, expires 2041**. Assignee: **United States of Navy**. Navy Case 102680.

Claim 1: generate a laser-induced plasma filament, and **"rastering the LIPF using optics and mirrors to generate a volumetric image in space."** Claim 3: **"each laser system being configured to generate a ghost image such that a plurality of air vehicles appear to be present."**

The decoy **moves with the aircraft** is created "less than a millionth of a second," and can be placed at any distance. David Hambling, Forbes, 2020; the objects in the released DoD video "rotate mid-air and zip along at phenomenal speed: **all maneuvers which would be easy to reproduce with a phantom projected image.**"

Known weaknesses in this work

- The Manzano 1980 case and the phrase "a type unknown to their electronical equipment" are **absent from AARO's historical report** — zero mentions of "Manzano," "Kirtland," or "electronical." That file remains unread by anyone outside a classified room.
- The Institute 22 Soviet case rests on a single tertiary source and a one-citation encyclopedia article, which opens with "this article needs more citations" — while describing the only nuclear near-miss in the record.
- The Iran drone shootdown has no dedicated encyclopedia article, so the "coverage tracks embarrassment" claim is supported by absence of coverage rather than by an editor's statement.
- The Condign volume titles are verifiable; the specific neuro-anatomical quotations attributed to it by a partisan source were **not** independently confirmed. I confirmed the executive-summary statement at lower resolution and said so.

What would change the verdict

- Comparative gamma spectrometry on the 1966 bark pair.
- Trajectory reconstruction of the "shot down" video.
- Any physical object with a documented chain of custody.
- A technosignature under a handshake model rather than a beacon model.

Seven falsifiers — each a test on a file, not an argument

- Occlusion failure.** A projected image cannot self-occlude: parts of the shape cannot pass in front of other parts of it. Real objects show depth-ordered occlusion. Frame-by-frame test.
- No background parallax.** A projection has a fixed viewpoint. Stars or terrain must not shift relative to the decoy through a known aircraft manoeuvre.
- Motion coupling.** The patent says the decoy moves *with* the aircraft, not like a flare. Plot the two tracks.
- Emission mismatch.** It is plasma — optically luminous, not a clean hot-body IR signature. Compare against a flare, an engine, and a low-observable airframe.
- Spatial coherence.** Rastering implies a generated pattern. Inter-frame correlation will be phase-coherent in a way real objects are not.
- No carrying platform.** A decoy needs a launching aircraft in sensor range. If no asset is in frame, this is excluded outright — and most UAP video is naval.
- Response to jamming.** A countermeasure is built to be defeated. A real object is not.

The honest bound: this is a *missile* countermeasure, deployed under attack. It cannot explain Gimbal, GoFast, or Nimitz, and the inventor of the concept conceded as much. What it can do is explain swarms of orbs near a naval asset — and it means the adjudication list was never complete.
